Summary

Final-year Data Science student skilled in Python, SQL, and Power BI, with hands-on experience building end-to-end analytics dashboards, predictive models, and full-stack data platforms. Proven ability to turn raw data into actionable insights, with measurable results in forecasting accuracy, churn reduction, and inventory optimization. Looking to apply strong analytical and engineering skills to a Data Analyst / Data Science role.

Skills

Data Analysis & Visualization: Excel, Power BI, Tableau, Matplotlib, Seaborn, Plotly
Database Management: MySQL, PostgreSQL, Oracle, SQL Server
Programming & Scripting: Python (Pandas, NumPy, Scikit-learn, FastAPI), Java, C++, JavaScript, Next JS
Cloud & DevOps: AWS (SageMaker, EC2, S3, Lambda), Google Cloud, Git/GitHub, Vercel, Docker
Soft Skills: Problem-Solving, Critical Thinking, Communication, Attention to Detail

Projects

Swara Digital – Music Distribution Platform | *Next.js, Node.js, Supabase, Razorpay*

- *Freelance Project – Client: RR Creation*
- Developed an end-to-end web platform enabling independent artists to distribute music to 150+ global stores with zero commission.
- Engineered a secure backend using **Supabase Auth**, custom Admin Dashboard for release moderation.
- Integrated **Razorpay API** with idempotent webhooks for seamless subscription processing and real-time royalty payouts.
- Built an interactive analytics dashboard for artists to track streams, revenue, and geographic performance.

Sales Analysis and Forecasting Dashboard | *Power BI*

- Utilized historical sales data (over 3 years) to create a predictive dashboard in Power BI.
- Achieved 25% increase in reporting efficiency by automating monthly sales trend analysis.
- Improved decision-making for the marketing team by providing a forecast with a 90% accuracy rate.

Mumbai House Price Predictor | *Java (Swing), Python, Scikit-learn, Pandas*

- Built a hybrid desktop application with a Java Swing GUI frontend communicating with a Python ML backend via process spawning to predict Mumbai house prices based on locality, area, BHK, and amenities.
- Trained a Scikit-learn regression model on a cleaned Mumbai housing dataset, achieving reliable price estimates across 20+ localities.
- Implemented OOP principles (Inheritance, Polymorphism, Encapsulation, Interfaces) across modular Java panels — PredictionPanel, DataPanel, and ChartPanel — all extending a shared BasePanel.
- Integrated charts and trend graphs rendered via a Python backend, enabling visual exploration of locality-wise price distributions.

Churn Prediction Model for Subscription Service | *Python, Power BI*

- Designed and implemented a logistic regression model in Python to predict customer churn.
- Achieved 85% prediction accuracy, which enabled proactive retention strategies, reducing churn by 10% over 6 months.
- Presented findings through a Power BI dashboard, enabling business insights and customer retention actions.

Professional Achievements

Certifications & Courses:

- **Harvard University:** CS50's Introduction to AI
- **Columbia University:** Prompt Engineering
- **IBM:** Machine Learning With Python, Python for Data Science, AI & Development
- **Oracle Cloud Infrastructure:** AI Foundations Associate, Data Science
- **Google:** Google Data Analytics Professional Certificate

Education

Kes Shroff College — Mumbai, India
Bachelor of Science in Data Science — *Expected 2027*

HSC Maharashtra Board — Mumbai, India
Higher Secondary Certificate — *2024*

SSC Maharashtra Board — Mumbai, India
Secondary School Certificate — *2022*
